Updated Oil Volume:

Updated Salt Water Volume:

Updated Other Volume:

Updated Other Contaminant

Notes:

8/6/2014 at 12:58, on location. Met with personnel on site who witnessed event. Spray came out of flare and went directly south by southeast. Impact of spray difficult to detect on vegetation; however, a white pipeline marker shows clear impact. Marker is directly south by southeast of flare. Vegetation next to wellpad shows no clear visible impact. Electrical power box and wellpad fence line downhill to southeast show no visible staining. According to personnel, wind was very light at time of incident. Spray does not appear to have blown past the facility fence line.
